

# CARE & USE

## **Before First Use**

Remove all packaging, and any residual label adhesive then wash in hot soapy water, allow to dry.

## **Use**

Stellar Hard Anodised Bakeware is designed for oven and grill use up to 240°C, 475°F, Gas Mark 9. It is also suitable for hob use, like all quality cookware start on a low to medium heat and gradually raise to the desired temperature. (it will not work on an induction hob)

Not suitable for microwave use

Always use oven gloves or similar when moving the bakeware around the kitchen

## **Cleaning**

Hand wash only in warm soapy water (Allow bakeware to cool before plunging into washing water - pouring cold water into hot bakeware may cause warping).

Using a dishwasher will degrade and remove the hard anodised finish.

For stubborn stains simply soak in hot soapy water, an abrasive cloth can be used if necessary.

## **Other**

You may notice 2 “nicks” on the side of the bakeware, this is not a defect but an intrinsic part of the manufacturing process, and will not affect the performance/durability of your bakeware.
